

GREEN SPACES MANAGEMENT

The integrated vision in Green Spaces management

An effective control of a green space, requires a 360 degree integrated view in all aspects related in the daily management of those environments.

Aspects like human resources allocation, green areas irrigation/fertilization, water and electricity control, lakes monitoring, water pumps operation, water & air quality monitoring, fountains control, boreholes control, lighting control, maintenance, etc. are all part of the daily operations related with Green Spaces Management.

One Platform. All Operations. Anywhere.

Through the usage of IOT technology Compta offers a Cloud based "Green Spaces Management Solution" that integrates in the same platform the most commonly required modules for the green space daily operations.

Always available, anytime, anywhere with internet access.

Real-time operations with a flexible SaaS Business Model and multi-channel operations capable.
